 LOADING DIAGRAM FOR 62-FT BULKHEAD FLATCARS

Item No. 987001 has 14 of each lumber stack. So 14 x 8' stack, 14 x 12' stacks etc.
 Item No. 987002 has 28 of each lumber stack. So 28 x 8' stacks, 28 x 12' stacks etc.
 Plate C clearance will be load not exceeding 7-ft wide and 15'- 5" high from rail head.

Notice it is brick fashion as much as possible from left half to the right half of the car. I used the middle 14' layer of to be the top layer on this side of the car.

If you have 5 stacked loads which is the maximum height, you will need to adjust and glue vertical sticker .16 + " up from the flatcar deck so it can stick out at the top of the pile.

Sleepers are not shown for clarity. Stacks represents the overall envelope clearance. © Wheels of Time
