

Windshield for Wheels of Time Custom Editions Series 50/60/80 Vocational Trucks

- 1) Use a clear plastic dixie cup (No. 5 PP plastic)
- 2) Tape the pattern on the cup; closer to the lip part of the cup.
The curve of the cup matches the curve of the windshield.
- 3) Cut out the plastic windshield with pattern.
Be careful to make sure the pattern does not slip.
- 4) Use canopy glue such as Formula 560 to hold plastic windshield
on to the window opening of truck.

Notice that the bottom part of the windshield has a larger
curvature than the top part of the windshield.
